| 実施方法Venue | Online at TEMDEC | |
| タイトルTitle | Current Status, Outcomes and Challenges of the Portable Health Clinic Research & Development Activities | |
| 概要 (300字以内) Outline | <p>Portable Health Clinic (PHC) system is an advanced telemedicine system for unreached communities. Initially, it was developed for the primary care of rural communities in developing countries. Gradually, this modular system has added new service modules like eyecare, maternal & child health care, and COVID-19 care as per required in the communities. Recently, the PHC service has been extended to physically challenged and disabled people. This session will present some of the recent practices, outcomes of the maternal and child health (MCH) care services in Bangladesh, micro-Entrepreneurship development with PHC service, and a new service for elementary school health monitoring. At the same time, this session will also present various challenges for ensuring data accuracy and quality of services. Finally, the session will be concluded with a panel discussion with the speakers.</p> | |
